

CE EMC TEST REPORT

Report No.: DDT-B21111107-1E01

Applicant	:	TPV Electronics (Fujian) Co., Ltd.		
Address	:	Rongqiao Economic and Technological Development Zone, Fuqing City, Fujian Province, P.R. China		
Equipment under Test	:	LCD Monitor		
Model No.	:	**PD32******* ("*" = 0-9, A-Z, a-z, +, -, /, \ or blank)		
Trade Mark	:	N/A		

Issued By: Tianjin Dongdian Testing Service Co., Ltd.

Address: Building D-1, No. 19, West Road, Microelectronics Industrial Park,

Development Area, Tianjin, Chira

Tel: +86-22-58038033, E-mail: dat@dgddt.com. http://www.ddttest.com

CONTENTS

1.		Summary of Test Results	7
2.		General Test Information	
2.1		Description of EUT	
2.2		Primary Function of EUT

We Declare:

The equipment described above is tested and assessed by Tianjin Dongdian Testing Service Co., Ltd. and in the configuration assessed the equipment complied with the standards specified above. The tested and assessed results are contained in this test report and Tanjin Dongdian Testing Service Co., Ltd. is assumed of full responsibility for the accuracy and completeness of these assessments.

After test and evaluation, our opinion is that the equipment in accordance with the standards.

2. General Test Information

2.1 Description of EUT

EUT* Name	:	LCD Monitor ®
Model Number	:	**PD32****** ("*" = 0-9, A-Z, a-z, +, -, /, \ or blank)
Model Differences	:	All models difference is in sale marketing.
Serial Number	:	N/A
EUT function description	:	Please refer to user manual of this device
Power supply	1	100-240V 50/60Hz ®
EUT Class	ř	Class B
Maximum work frequency	ŀ	1279.77 MHz

Report No.: DDT-B21111107-1E01

Note: EUT is the abbreviation of equipment under test.

2.2 Primary Function of EUT

Function	Description
⊠Broadcast reception function	N/A
⊠Print	N/A
⊠Scan	N/A
☑Display or display output	© Display ©
⊠Musical tone generating	N/A
⊠Networking	N/A
	Audio output
⊠Telephony	N/A
⊠Bluetooth	® N/A ®
⊠Other:	N/A
Note: "⊠" means the product doe	es not have this function, "⊡" means the product has this

Note: "⊠" means the product does not have this function, "☑" means the product has this function, N/A means not applicable

QR-4-106-51 RevA/0

Page 8 of 83

2.3 Port of EUT

Port	Description
☑AC mains power port	AC Main Port (powered by dedicated AC/DC adapter)
⊠DC network power port	® N/A ®
⊠Wired network port	N/A
☑Signal data/control port	Two HDMI ports, One DP port, One Type-C port, Two audio in, Four USB Ports, One USB-B Port
⊠Antenna port	N/A
⊠Broadcast receiver tuner port	N/A
✓Audio output port	One audio out port, Two speakers
⊠Video output port	N/A
⊠Other:	N/A
Note: "⊠" means the product does means not applicable	not have this port, "☑" means the product has this port, N/A

Report No.: DDT-B21111107-1E01

2.4 Accessories of EUT

Description of Accessories	Manufacturer	Model number	Description	Remark
Adapter	DELTA	ADP-330CB B	N/A	N/A
Adapter	Lite-On	PA-1331-99	N/A	N/A
AC Cable	N/A	N/A	Length: 1.5m/1.8m, Unshielded	N/A
HDMI Cable	N/A	N/A	Length: 1.5m/1.8m, Shielded	N/A
DP Cable	N/A	N/A	Length: 1.5m/1.8m, Shielded	N/A
Type-C Cable	_® N/A	N/A	Length: 1.5m/1.8m, Shielded	N/A
AUDIO Cable N/A		N/A	Length: 1.5m/1.8m, Shielded	N/A
USB Cable N/A		N/A	Length: 1.5m/1.8m, Shielded	N/A

2.5 Test peripherals

2.6 Block diagram EUT configuration for test

Ferrite Core
Terminal

2.7 EUT operating mode(s)

Mode1: HDMI1	Connect HDMI cable from PC's HDMI port to EUT's HDMI1 Port. The test signal is color bars with moving picture element according to ITU-R BT 471-1.
Mode2: HDMI2	Connect HDMI cable from PC's HDMI port to EUT's HDMI2 Port. The test signal is color bars with moving picture element according to ITU-R BT 471-1.
Mode3: DP	Connect DP cable from PC's DP port to EUT's DP Port. The test signal is color bars with moving picture element according to ITU-R BT 471-1.
Mode4: Type-C	Connect Type-C cable from PC's Type-C port to EUT's Type-C Port. The test signal is color bars with moving picture element according to ITU-R BT 471-1.

QR-4-106-51 RevA/0 Page 10 of 83

2.8 Performance Criteria

During and/or after immunity testing for EN55035:2017, the EUT was monitored to the following

Report No.: DDT-B21111107-1E01

performance criterion.

performance criterion.		(R) (R)
Criterion	Operating mode(s)	Description
P	e"	No noticeable degradation or loss of function is allowed during the test. The EUT shall continue to operate as intended without operator intervention.
® A	1,2,3,4	The product conforms with the requirements of clause 8 of EN55035:2017.
	×	The product conforms with the requirements of Annex of EN55035:2017.
	DR	☐ Annex A ☐ Annex B ☐ Annex C ☒ Annex D ☐ Annex E ☐ Annex F ☒ Annex G
S B	1,2,3,4	No noticeable degradation or loss of function is allowed after the test. The EUT shall continue to operate as intended without operator intervention. During the test, degradation of performance is allowed. No change of operating state or stored data is allowed to persist after the test. The product conforms with the requirements of clause 8 of EN55035:2017. The product conforms with the requirements of Annex of EN55035:2017. Annex A Annex B Annex C Annex D Annex E Annex F Annex G
c	1,2,3,4	Loss of function is allowed, provided that the function is self recoverable. or can be restored by the operation of the controls by the user. The product conforms with the requirements of clause 8 of EN55035:2017. The product conforms with the requirements of Annex of EN55035:2017. Annex A Annex B Annex C Annex D Annex E Annex F Annex G

2.9 Deviations of test standard

[Standard deviation 1] Surge immunity test was done according to IEC 61000-4-5:2014 instead of IEC 61000-4-5:2005.

[Standard deviation 2] Radio-frequency conducted immunity test was done according to IEC 61000-4-6:2013 instead of IEC 61000-4-6:2008.

2.10 Test laboratory

Tianjin Dongdian Testing Service Co., Ltd.

Address: Building D-1, No. 19, Weisi Road, Microelectronics Industrial Park Development Area, Tianiin, China.

Report No.: DDT-B21111107-1E01

Tel: +86-22-58038033, http://www.ddttest.com, Email: ddt@dgddt.com

NVLAP (National Voluntary Laboratory Accreditation Program) CODE: 500036-0

CNAS (China National Accreditation Service for Conformity Assessment) CODE: L13402

FCC Designation Number: CN5004; FCC Test Firm Registration Number: 368676

ISED (Innovation, Science and Economic Development Canada) Company Number: 27768

Conformity Assessment Body Identifier: CN0125

VCCI Facility Registration Number: C-20089, T-20093, R-20125, G-20122

2.11 Measurement uncertainty

Test	Item	Uncertainty			
	Main terminal	3.4dB (150KHz-30MHz)			
Conducted emission	Telecommunication (ISN T800)	4.59dB			
ar	Telecommunication (ISN ST08)	3.5dB			
Uncertainty for 10m R	adiation Emission test	5.2 dB (Antenna Polarize: H) 5.2 dB (Antenna Polarize: V)			
(30MHz	z-1GHz)				
	ation disturbance test o 6GHz)	5.0dB			
Marmonio	cs current ®	3.1 %®			
Voltage fluctu	ation & Flicker	1.7 %			

Note: This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

We have conducted the Electrostatic discharge, Electrical fast transient/burst, Surge, Voltage dips, short interruptions and voltage variations tests to check the uncertainty. Radiated, radio-frequency, electromagnetic field 5.4dB. Conducted disturbances, induced by radio-frequency fields 1.1dB.

QR-4-106-51 RevA/0 Page 12 of 83

3. Conducted Emission (mains power port)

3.1 General information

Test date	Nov. 18, 2021	Test engineer	Sam				
Climate condition	Ambient temperature	23.8±1 ℃	Relative humidity 34±1				
Climate condition	Atmospheric pressure 101.4±0.2 kPa						
Test place	Shield Room 2#						

Report No.: DDT-B21111107-1E01

3.2 Test Equipment

Equipment	Manufacturer	Model No.	Serial No.	Last Cal.	Cal. Interval
Test Receiver	R&S	ESCI	101397	Mar. 03, 2021	1 Year
LISN 1	R&S	ENV216	101122	Mar. 31, 2021	1 Year
LISN 2	R&S	ENV216	101254	Mar. 17, 2021	1 Year
Test software	TOYO	EP5/CE	V 5.4.40	N/A	N/A

3.3 Reference standard

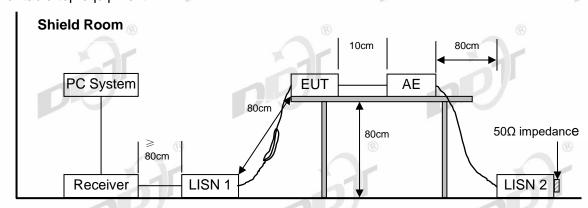

EN 55032:2015+A11:2020 (Class B)

EN 55032:2015

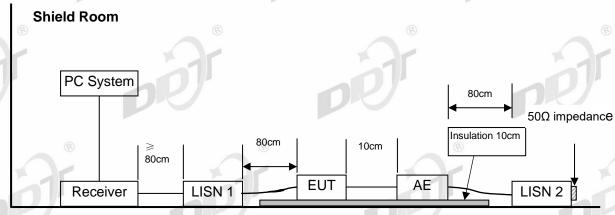

EN 55032:2015+AC:2016 BS EN 55032:2015+A11:2020

3.4 Block diagram of test setup

For table-top equipment

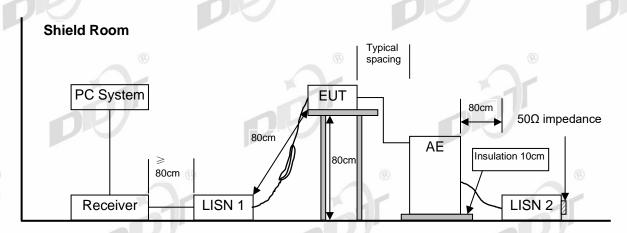

For floor standing equipment

QR-4-106-51 RevA/0 Page 13 of 83

For combinations equipment

Report No.: DDT-B21111107-1E01

3.5 Limits

Class A

0.0.007			12	
Frequency			Quasi-Peak Level dB(μV)	Average Level dB(μV)
150kHz	~	500kHz	79	66
500kHz	~	30MHz	73	60

Class B

Frequency			Quasi-Peak Level dB(μV)	Average Level dB(μV)
150kHz	~	500kHz	66 ~ 56*	56 ~ 46*
500kHz	~	5MHz	56	46
5MHz	~	30MHz	60	50

Notes: 1. * Decreasing linearly with logarithm of frequency.

2. The lower limit shall apply at the transition frequencies.

3.6 Test procedure

- (1) The EUT was placed on a non-metallic table, 80cm above the ground plane.
- (2) The EUT's power adapter was connected to the power mains through a line impedance stabilization network (L.I.S.N). which this provided a 50-ohm coupling impedance for the EUT (Please refer to the block diagram of the test setup and photographs). Both sides of power line were checked for maximum conducted disturbance. In order to find the maximum emission, the relative positions of equipment and all of the interface cables were changed according to EN 55032 on conducted disturbance emission test.
- (3) The bandwidth of test receiver is set at 9 kHz.
- (4) The frequency range from 150 kHz to 30MHz is checked.
- (5) Pre-scan measurements were performed in all operating mode or resolution.

 But final measurements were performed in worst cases based on pre-scan measurements.

QR-4-106-51 RevA/0 Page 14 of 83

The EUT with following test modes were pre-tested:

Adapter: ADP-330CB B

4.5 Limits for conducted disturbance at the telecommunication ports

Class A

Frequenc	y		Quasi-Peak Level dB(μV)	Average Level dB(μV)	
150kHz	~_	500kHz	97 ~ 87*	84 ~ 74*	
5MHz	~	30MHz	87	74	

Report No.: DDT-B21111107-1E01

Class B

Frequenc	у		Quasi-Peak Level dB(μV)	Average Level dB(μV)
150kHz	~	500kHz	84 ~ 74*	74 ~ 64*
5MHz	~	30MHz	74	64

Notes: 1. * Decreasing linearly with logarithm of frequency. 2. The lower limit shall apply at the transition frequencies.

4.6 Test procedure

The EUT was placed on a 0.8m high non-metallic table in shielded room.

Connect ISN directly to reference ground plane.

The measured voltage at the measurement port of the ISN should correct the reading by adding the voltage division factor of the ISN, and compare to the voltage limit.

For Local Area Network (LAN) device, in order to make reliable emission measurements representative of high LAN utilization it is only necessary to create a condition of LAN utilization in excess of 10 % and sustain that level for a minimum of 250 ms. The content of the test traffic should consist of both periodic and pseudo-random messages in order to emulate realistic types of data transmission (e.g. random: files compressed or encrypted; periodic: uncompressed graphic files, memory dumps, screen updates, disk images). If the LAN maintains transmission during idle periods measurements shall also be made during idle periods.

When disturbance voltage measurements are performed on a single unscreened balanced pair, an adequate ISN for two wires shall be used; when performed on unscreened cables containing two balanced pairs, an adequate ISN for four wires shall be used.

4.7 Test result

Not applicable: This product does not have a communication port.

Below 1GHz

For table-top equipment

Report No.: DDT-B21111107-1E01

5.5 Limits

Class A

		Field Strengths Limits at	Field Strengths Limits at 3m
Equipment	Frequency	10m measuring distance	measuring distance
		dB(μV)/m	dB(μV)/m
Class A	30MHz to 230MHz	40	50
Equipment	230MHz to 1000MHz	47	57

Class B

Equipment	Frequency	10m measuring distance	Field Strengths Limits at 3m measuring distance dB(µV)/m
Class B	30MHz to 230MHz	30	40
Equipment	230MHz to 1000MHz	37	47

Note: (1) The smaller limit shall apply at the cross point between two frequency bands. (2) Distance is the distance in meters between the measuring instrument, antenna and the closest point of any part of the device or system.

QR-4-106-51 RevA/0 Page 22 of 83

5.6 Test procedure

For Radiated emissions:

(1) The EUT was placed on a non-metallic table, 80 cm above the ground plane inside a semianechoic chamber.

Report No.: DDT-B21111107-1E01

- (2) Test antenna was located □3m / ☑10m (see note) from the EUT on an adjustable mast. A pre-scan was first performed in order to find prominent radiated emissions. For final emissions measurements at each frequency of interest, the EUT were rotated and the antenna height was varied between 1m and 4m in order to maximize the emission. Measurements in both horizontal and vertical polarities were made and the data was recorded. In order to find the maximum emission, the relative positions of equipment and all of the interface cables were changed according to EN 55032 on radiated emission test.
- ⑤(3) Spectrum frequency from 30MHz to 1GHz / 2GHz was investigated.
 - (4) For final emissions measurements at each frequency of interest, the EUT were rotated and the antenna height was varied between 1m and 4m in order to maximize the emission. Measurements in both horizontal and vertical polarities were made and the data was recorded. In order to find the maximum emission, the relative positions of equipment and all of the interface cables were changed according to EN 55032 on Radiated Emission test.
 - (5) For emissions from 30MHz to 1GHz, Quasi-Peak values were measured with EMI Receiver and the bandwidth of Receiver is 120 kHz.
- (6) Final measurements consisted of 3 steps. First step, frequency fine tuning to find exact emission frequency. Second step, rechecking to search for maximum height and azimuth for interference from EUT In final step, there are conducted measuring with quasi-peak detector for points which are detected from 1st step & 2nd step. Results checked manually and points close to the limit line were re-measured.
- (7) Pre-scan measurements were performed in all operating mode or resolution. But final measurements were performed in worst cases based on pre-scan measurements.

Above 1GHz For table-top equipment

Report No.: DDT-B21111107-1E01

6.5 Limits

Frequency range	Limits of Class	A, dB(μV/m)	Limits of Class B, dB(μV/m)							
Limits (GHz)	Peak	C/Average	Peak	C/Average						
1~3	76	56	70	50						
3 ~ 6	80	60	74	54						
Note: The lower limit shall apply at the transition frequency										

6.6 Test procedure

The highest internal source of an EUT is defined as the highest frequency generated or used within the EUT or on which the EUT operates or tunes.

If the highest frequency of the internal sources of the EUT is less than 108 MHz, the measurement shall only be made up to 1 GHz.

If the highest frequency of the internal sources of the EUT is between 108 MHz and 500 MHz, the measurement shall only be made up to 2 GHz.

If the highest frequency of the internal sources of the EUT is between 500 MHz and 1 GHz, the measurement shall only be made up to 5 GHz.

If the highest frequency of the internal sources of the EUT is above 1 GHz, the measurement shall be made up to 5 times the highest frequency or 6 GHz, whichever is less.

For emissions above 1GHz, both Peak and Average level were measured with Spectrum Analyzer, and the RBW is set at 1MHz.

Measurements within 20 dB of the limit were then maximized by adjusting turntable position.

QR-4-106-51 RevA/0 Page 29 of 83

Final measurements were made using an C/Average detector.

Results checked manually and points close to the limit line were re-measured.

Pre-scan measurements were performed in all operating mode or resolution. But final measurements were performed in worst cases based on pre-scan measurements.

Report No.: DDT-B21111107-1E01

Note1) (P): Abbreviation of Antenna Polarity

Note2) Reading PK / C/AV : Received raw Peak / C/Average signal

Note3) Factor = Antenna factor + Cable loss - Amplifier gain

Note4) Level PK / C/AV = Reading PK / C/AV + Factor, Real signal Peak / C/Average level

Note5) Margin PK / C/AV = Limit – Level PK / C/AV

PK : Abbreviation of Peak

C/AV: Abbreviation of CISPR Average

9.5 Test levels and performance criterion

T	Performance Criteria	
Air Discharge	±2kV, ±4kV and ±8kV	D
Contact Discharge	±4kV	В

Report No.: DDT-B21111107-1E01

Performance criteria B description: During the test, degradation of performance is allowed. However, no change of operating state or stored data is allowed to persist after the test. After the test, the EUT shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacturer, when the EUT is used as intended.

9.6 Test procedure

Air Discharge:

The test was applied on non-conductive surfaces of EUT. The round discharge tip of the discharge electrode was approached as fast as possible to touch the EUT. After each discharge, the discharge electrode was removed from the EUT. The generator was re-triggered for a new single discharge and repeated 20 times for each pre-selected test point. This procedure was repeated until all the air discharge completed.

Contact Discharge:

All the procedure was same as air discharge. Except that the generator was re-triggered for a new single discharge. The tip of the discharge electrode was touching the EUT before the discharge switch was operated.

Indirect discharge for horizontal coupling plane:

At least 20 single discharges were applied to the horizontal coupling plane, at points on each side of the EUT. The discharge electrode positions vertically at a distance of 0.1m from the EUT and with the discharge electrode touching the coupling plane.

Indirect discharge for vertical coupling plane:

At least 20 single discharges were applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m X 0.5m, was placed parallel to, and positioned at a distance of 0.1m from the EUT. Discharges were applied to the coupling plane, with this plane in sufficient different positions that the four faces of the EUT are completely illuminated.

10.4 Block diagram of test setup

10.5 Test levels and performance criterion

	Swept frequency test	Performance Criteria
Frequency (MHz)®	80 to 1000 ®	®
Field Strength	3V/m rms voltage level of the unmodulated signal	-Ar
Modulation	AM modulated to a depth of 80% by a sine wave of ⊠1kHz, □400Hz (note 1)	A
Step Size	1% increments	
Dwell time	<5 Sec.	

Report No.: DDT-B21111107-1E01

	Spot frequency test	Performance Criteria
Frequency (MHz)	1800, 2600, 3500, 5000	
Field Strength	3V/m rms voltage level of the unmodulated signal	۸
Modulation	AM modulated to a depth of 80% by a sine wave of ⊠1kHz, □400Hz (note 1)	А
Dwell time	<5 Sec.	7

Note 1: The 1kHz modulation may be replaced by a different audio modulation frequency more appropriate for a given EUT if, for example, 1kHz is not within the operating audio range of the EUT.

Performance criteria A description for devices with the audio output function: The measured acoustic interference ratio and/or the measured electrical interference ratio during the test shall be -20 dB or better.

For equipment with audio output function:

☑The acoustic measurement method was selected according to clause G6.4.1 of EN 55035.

The electrical measurement method was selected according to clause G6.4.2 of EN 55035.

Performance criteria A for devices with the telephony function.

Frequency range	Acoustic or	Equivalent direct	t measurement	
Frequency range MHz	electrical interference ratio	dB(SPL)	Digital dBm0	Analogue dBm0
80 to 1000	-0 dB	75	-30	-30

Note: At the step in the frequency range, the lower limit shall be applied.

The interference ratio (electrical or acoustic) shall meet the limits in column 2; or,

The acoustic level of the demodulated audio shall be less than the limits in column 3; or

The digitally coded level of demodulated audio shall be less than limits in column 4; or,

The analogue level of the demodulated audio shall be less than the limits in column 5.

Performance criteria A description for other devices: During and after the test the EUT shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a minimum performance level specified by the manufacturer when the EUT is used as intended.

QR-4-106-51 RevA/0 Page 49 of 83

10.6 Test procedure

The field sensor is placed on the EUT table (0.8 meter above the ground) which is 3 meters away from the transmitting antenna. Through the signal generator, power amplifier and transmitting antenna to produce a uniformity field strength (3V/m measured by field sensor) around the EUT table from frequency range specified and records the signal generator's output level at the same time for whole measured frequency range. Then, put EUT and its simulators on the EUT turn table and keep them 3 meters away from the transmitting antenna which is mounted on an antenna tower and fixes at 1.4 meter height above the ground. Using the recorded signal generator's output level to measure the EUT from frequency range specified and both horizontal & vertical polarization of antenna must be set and measured. Each of the four sides of EUT must be faced this transmitting antenna and measures individually.

Report No.: DDT-B21111107-1E01

Note: This test shall be additionally performed on analogue/digital data ports, and DC network power ports, of radio equipment and associated ancillary equipment, if the cables may be longer than 3 m.

Performance criteria B description: During the test, degradation of performance is allowed. However, no change of operating state or stored data is allowed to persist after the test. After the test, the EUT shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacturer, when the EUT is used as intended.

11.6 Test Procedure

The EUT and its simulators were placed on the ground reference plane and were insulated from it by a wood support $0.1m \pm 0.01m$ thick. The ground reference plane was $1m^*1m$ metallic sheet with 0.65mm minimum thickness. This reference ground plane was project beyond the EUT by at least 0.1m on all sides and the minimum distance between EUT and all other conductive structure, except the ground plane was more than 0.5m. All cables to the EUT was placed on the wood support, cables not subject to EFT/B was routed as far as possible from the cable under test to minimize the coupling between the cables.

For DC input and AC power ports:

The EUT was connected to the power mains by using a coupling device that couples the EFT interference signal to AC power lines. Both positive transients and negative transients of test voltage were applied during compliance test and the duration of the test can't less than 2mins. For signal ports:

The capacitive coupling clamp was connected to the power by using a coupling device that couples the EFT interference signal to capacitive coupling clamp. Both positive transients and negative transients of test voltage were applied during compliance test and the duration of the test can't less than 2mins.

Performance criteria B description: During the test, degradation of performance is allowed. However, no change of operating state or stored data is allowed to persist after the test. After the test, the EUT shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacturer, when the EUT is used as intended.

12.6 Test Procedure

For line-to-neutral coupling mode, provide a 0.5 kV/1 kV 1.2/50 us voltage surge (at open-circuit condition) and 8/20 us current surge to EUT selected points.

For line-to-ground coupling mode, provide a 0.5 kV/1 kV/2 kV 1.2/50 us voltage surge (at open-circuit condition) and 8/20 us current surge to EUT selected points.

The number of pulses applied shall be as follows:

- Five positive pulses line-to-neutral at 90° phase
- Five negative pulses line-to-neutral at 270° phase

The following additional pulses are required only if the EUT has an earth connection or if the EUT is earthed via any AE.

- Five positive pulses line-to-earth at 90° phase
- Five negative pulses line-to-earth at 270° phase
- Five negative pulses neutral-to-earth at 90° phase
- Five positive pulses neutral-to-earth at 270° phase

Maximum 1/min repetition rate are applied during test.

Different phase angles are done individually.

For telecommunication surge test, each line of internet port to ground coupling mode, provide a 1.0kV 10/700us voltage surge (at open-circuit condition) and 5/320us current surge to EUT selected points.

At least 5 positive and 5 negative (polarity) tests with a maximum 1/min repetition rate are applied during test.

Record the EUT operating situation during compliance test and decide the EUT immunity criterion for above each test.

IEC 61000-4-6:2013 BS EN 61000-4-6:2014

13.4 Block diagram of test setup

For audio output function (electrical measurement, direct connection to EUT)

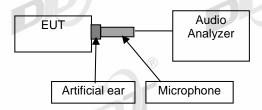

QR-4-106-51 RevA/0 Page 58 of 83

For audio output function (acoustic measurement)

For audio output function (on-ear acoustic measurement)

13.5 Test levels and performance criterion

Test Level		Performance Criteria
	0.15MHz to 10MHz, 3V rms voltage level of the unmodulated signal	1
	10MHz to 30MHz, 3V to 1V rms voltage level of the unmodulated signal	
	30MHz to 80MHz, 1V rms voltage level of the unmodulated signal	Α
Modulation	AM modulated to a depth of 80% by a sine wave of \square 1kHz, \square 400Hz (note 1)	8)
Step Size	1% increments	
Dwell time	1 Sec.	

Report No.: DDT-B21111107-1E01

Note 1: The 1kHz modulation may be replaced by a different audio modulation frequency more appropriate for a given EUT if, for example, 1kHz is not within the operating audio range of the EUT.

Performance criteria A description for devices with the audio output function: The measured acoustic interference ratio and/or the measured electrical interference ratio during the test shall be -20 dB or better.

☑The acoustic measurement method was selected according to clause G6.4.1 of EN 55035.

☑The electrical measurement method was selected according to clause G6.4.2 of EN 55035.

Performance criteria A for devices with the telephony function.

Frequency range	Acoustic or electrical	Equivalent direct measurement			
MHz	interference ratio	dB(SPL)	Digital dBm0	Analogue dBm0	
0.15 to 30	-20 dB	55	-50	-50	
30 to 80	-10 dB	65	-40	-40	

Note: At the step in the frequency range, the lower limit shall be applied.

The interference ratio (electrical or acoustic) shall meet the limits in column 2; or, The acoustic level of the demodulated audio shall be less than the limits in column 3; or The digitally coded level of demodulated audio shall be less than limits in column 4; or, The analogue level of the demodulated audio shall be less than the limits in column 5. Performance criteria A description for other devices: During and after the test the EUT shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a minimum performance level specified by the manufacturer when the EUT is used as intended.

QR-4-106-51 RevA/0 Page 59 of 83

13.6 Test procedure

The EUT are placed on an insulating support 0.1m high above a ground reference plane. CDN (coupling and decoupling device) is placed on the ground plane about 0.3m from EUT. Cables between CDN and EUT are as short as possible, and their height above the ground reference plane shall be between 30 and 50 mm (where possible).

Report No.: DDT-B21111107-1E01

The disturbance signal described below is injected to EUT through CDN.

The EUT operates within its operational mode(s) under intended climatic conditions after power on.

The frequency range is swept from 0.150MHz to \$\sum 80MHz/\sum 230MHz\$, the interference signal level according to clause 10.5, and with the disturbance signal 80% amplitude modulated with a \$\sum 1kHz / \sum 400Hz sine wave.

The rate of sweep shall not exceed 1.5*10-3decades/s. Where the frequency is swept incrementally; the step size shall not exceed 1% of the start and thereafter 1% of the preceding frequency value.

Recording the EUT operating situation during compliance testing and decide the EUT immunity criterion.

Report No.: DDT-B21111107-1E01

Performance criteria A description: During and after the test the EUT shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a minimum performance level specified by the manufacturer when the EUT is used as intended.

RevA/0

14.6 Test procedure

The EUT shall be subjected to the test magnetic field by using the induction coil of standard dimensions (1m*1m) and shown in Section 14.4 Then induction coil shall then be rotated by 90°in order to expose the EUT to the test field with different orientations.

Report No.: DDT-B21111107-1E01

15.4 Block diagram of test setup

15.5 Test levels and performance criterion

Test Level %UT	Duration (in period)	Performance Criterion
<5	0.5	В
70	25 for 50Hz/30 for 60Hz	С
<5	250 for 50Hz/300 for 60Hz	С

Performance criteria B description: During the test, degradation of performance is allowed. However, no change of operating state or stored data is allowed to persist after the test. After the test, the EUT shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacturer, when the EUT is used as intended.

QR-4-106-51 RevA/0 Page 65 of 83

Performance criteria C description: During and after testing, a temporary loss of function is allowed, provided the function is self recoverable, or can be restored by the operation of the controls or cycling of the power to the EUT by the user in accordance with the manufacturer's instructions. Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be lost.

Report No.: DDT-B21111107-1E01

15.6 Test procedure

The EUT and test generator were setup as shown. The interruptions are introduced at selected phase angles with specified duration. Record any degradation of performance.
