

# **CE EMC Test Report**

Project No. : 2001C073 Equipment : LCD Monitor

Brand Name : N/A

**Test Model** : \*\*24P2\*\*\*\*\*\*\*(\*=0-9,A-Z,a-z,+,-,/,\ or blank)

Series Model : N/A

**Applicant**: TPV Electronics (Fujian) Co., Ltd.

Address : Rongqiao Economic and Technological Development Zone, Fuqing City,

Fujian Province, P.R. China

Date of Receipt : Jan. 14, 2020

**Date of Test** : Feb. 10, 2020 ~ Feb. 28, 2020

Issued Date : Mar. 30, 2020

Report Version : R00

Test Sample : Engineering Sample No.: DG20200115108

**Standard(s)** : EN 55032:2012+AC:2013

EN 55032:2015

EN 55032:2015+AC:2016

EN 55035:2017

IEC 61000-3-2:2014 / EN 61000-3-2:2014 IEC 61000-3-3:2013 / EN 61000-3-3:2013

AS/NZS CISPR 32:2015 / CISPR 32:2015+C1:2016

AS/NZS CISPR 32:2013 / CISPR 32:2012

The above equipment has been tested and found compliance with the requirement of the relative standards by BTL Inc.

Prepared by: Kang Zhang

Approved by: Kevin Li

Certificate #5123.02

Add: No.3, Jinshagang 1st Road, Shixia, Dalang Town, Dongguan, Guangdong, China.

#### **Declaration**

**BTL** represents to the client that testing is done in accordance with standard procedures as applicable and that test instruments used has been calibrated with standards traceable to international standard(s) and/or national standard(s).

**BTL**'s reports apply only to the specific samples tested under conditions. It is manufacture's responsibility to ensure that additional production units of this model are manufactured with the identical electrical and mechanical components. **BTL** shall have no liability for any declarations, inferences or generalizations drawn by the client or others from **BTL** issued reports.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, A2LA, or any agency of the U.S. Government.

This report is the confidential property of the client. As a mutual protection to the clients, the public and ourselves, the test report shall not be reproduced, except in full, without our written approval.

**BTL**'s laboratory quality assurance procedures are in compliance with the **ISO/IEC 17025** requirements, and accredited by the conformity assessment authorities listed in this test report.

BTL is not responsible for the sampling stage, so the results only apply to the sample as received.

The information, data and test plan are provided by manufacturer which may affect the validity of results, so it is manufacturer's responsibility to ensure that the apparatus meets the essential requirements of applied standards and in all the possible configurations as representative of its intended use.

#### Limitation

For the use of the authority's logo is limited unless the Test Standard(s)/Scope(s)/Item(s) mentioned in this test report is (are) included in the conformity assessment authorities acceptance respective. Please note that the measurement uncertainty is provided for informational purpose only and are not use in determining the Pass/Fail results.

# NOTE:

(1) "N/A" denotes test is not applicable to this device.

# 1.1 TEST FACILITY

The test facilities used to collect the test data in this report is at the location of No.3, Jinshagang 1st Road, Shixia, Dalang Town, Dongguan, Guangdong, China.

# 1.2 MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2, The BTL measurement uncertainty is less than the CISPR 16-4-2  $U_{cispr}$  requirement.

The reported uncertainty of measurement  $\mathbf{y} \pm \mathbf{U}$ , where expanded uncertainty  $\mathbf{U}$  is based on a standard uncertainty multiplied by a coverage factor of  $\mathbf{k}=2$ , providing a level of confidence of approximately 95%.

A. Radiated emissions up to 1 GHz measurement:

| Test Site              | Method         | Measurement Frequency Range | Ant.<br>H / V | U,(dB) |
|------------------------|----------------|-----------------------------|---------------|--------|
| DG-CB08<br>(10m) CISPR | 30MHz ~ 200MHz | ٧                           | 4.44          |        |
|                        | 1 (1000        | 30MHz ~ 200MHz              | Н             | 3.44   |
|                        |                | 200MHz ~ 1,000MHz           | V             | 4.28   |
|                        |                | 200MHz ~ 1,000MHz           | Н             | 3.52   |

B. Radiated emissions above 1 GHz measurement:

| Test Site       | Method | Measurement Frequency Range | U,(dB) |
|-----------------|--------|-----------------------------|--------|
| DG-CB08<br>(3m) | CISPR  | 1GHz ~ 6GHz                 | 4.36   |

C. Conducted emissions AC mains power port measurement:

| Test Site | Method | Measurement Frequency Range | U,(dB) |
|-----------|--------|-----------------------------|--------|
| DG-C01    | CISPR  | 150kHz ~ 30MHz              | 2.90   |

D. Harmonic/ Flicker Measurement:

| Test Site | Method       | Item    | U (%) |
|-----------|--------------|---------|-------|
| DG-C01    | EN 61000-3-2 | Current | 0.593 |
|           | EN 61000-3-3 | Voltage | 0.595 |

# E. Immunity Measurement:

| Test Site | Method         | Item  | U       |
|-----------|----------------|---|---------|
|           |                | Rise time tr  | 6.80%   |

# 2. GENERAL INFORMATION

# 2.1 GENERAL DESCRIPTION OF EUT

| Equipment                         | LCD Monitor   |  |
|-----------------------------------|---|--|
| Brand Name                        | N/A   |  |
| Test Model                        | **24P2******(*=0-9,A-Z,a-z,+,-,/,\ or blank)                                  |  |
| Series Model                      | N/A   |  |
| Model Difference(s)               | Only differ in model name due to marketing purpose.                           |  |
| Power Source                      | AC Mains.   |  |
| Power Rating                      | 100-240V~ 50-60Hz 1.5A  |  |
| Connecting I/O Port(s)            | 1* AC port 1* D-SUB port 5* USB port 1* DP port 1* HDMI port 1* Earphone port |  |
| Classification Of EUT             | Class B   |  |
| Highest Internal<br>Frequency(Fx) | 148.5MHz  |  |

| Cable Type    | Shielded Type | Ferrite Core | Length(m)   | Note                             |
|---------------|---------------|--------------|-------------|----------------------------------|
| AC Power Cord | Non-shielded  | NO           | 1.8/1.5/1.2 | 1.8m is worst case<br>Detachable |
| D-SUB         | Shielded      | YES          | 1.8/1.5/1.2 | Bonded two Ferrite Cores         |
| Display       | Shielded      | NO           | 1.8/1.5/1.2 | -                                |
| HDMI          | Shielded      | NO           | 1.8/1.5/1.2 | -                                |

#### Note:

- 1. For a more detailed features description, please refer to the manufacturer's specifications or the user's manual.
- 2. Power cable 1.8m, 1.5m,1.2m length, worst case is Power cable 1.8m with D-SUB+ Display + HDMI length testing and recording in test report.

# 2.2 DESCRIPTION OF TEST MODES

To investigate the maximum EMI emission characteristics generates from EUT, the test system was pre-scanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned above was evaluated respectively.

| Pretest Mode | Description                   |  |  |
|--------------|-------------------------------|--|--|
| Mode 1       | HDMI 1920*1080/75Hz 1.8m H    |  |  |
| Mode 2       | Display 1920*1080/75Hz 1.8m H |  |  |
| Mode 3       | D-SUB 1920*1080/60Hz 1.8m H   |  |  |
| Mode 4       | HDMI 1080P 1.8m H             |  |  |
| Mode 5       | HDMI 1280*1024/60Hz 1.8m H    |  |  |
| Mode 6       | HDMI 640*480/60Hz 1.8m H      |  |  |
| Mode 7       | HDMI 1920*1080/75Hz 1.5m H    |  |  |
| Mode 8       | HDMI 1920*1080/75Hz 1.2m H    |  |  |
| Mode 9       | HDMI 1920*1080/75Hz 1.8m V    |  |  |

| Radiated emissions up to 1 GHz test |                               |  |  |
|-------------------------------------|-------------------------------|--|--|
| Final Test Mode Description         |                               |  |  |
| Mode 1                              | HDMI 1920*1080/75Hz 1.8m H    |  |  |
| Mode 2                              | Display 1920*1080/75Hz 1.8m H |  |  |
| Mode 4                              | HDMI 1080P 1.8m H             |  |  |

| Radiated emissions Above 1 GHz test |                               |  |  |
|-------------------------------------|-------------------------------|--|--|
| Final Test Mode Description         |                               |  |  |
| Mode 1                              | HDMI 1920*1080/75Hz 1.8m H    |  |  |
| Mode 2                              | Display 1920*1080/75Hz 1.8m H |  |  |
| Mode 4                              | HDMI 1080P 1.8m H             |  |  |

| Conducted emissions AC mains power port test |                               |  |  |
|--|-------------------------------|--|--|
| Final Test Mode Description                  |                               |  |  |
| Mode 1                                       | HDMI 1920*1080/75Hz 1.8m H    |  |  |
| Mode 2                                       | Display 1920*1080/75Hz 1.8m H |  |  |
| Mode 4                                       | HDMI 1080P 1.8m H             |  |  |

| Harmonic current & Voltage fluctuations (Flicker) Test |                            |  |  |
|--|----------------------------|--|--|
| Final Test Mode Description                            |                            |  |  |
| Mode 1   | HDMI 1920*1080/75Hz 1.8m H |  |  |

| Immunity Test   |                               |  |  |  |
|-----------------|-------------------------------|--|--|--|
| Final Test Mode | Description                   |  |  |  |
| Mode 1          | HDMI 1920*1080/75Hz 1.8m H    |  |  |  |
| Mode 2          | Display 1920*1080/75Hz 1.8m H |  |  |  |
| Mode 3          | D-SUB 1920*1080/60Hz 1.8m H   |  |  |  |
| Mode 4          | HDMI 1080P 1.8m H             |  |  |  |
| Mode 5          | HDMI 1280*1024/60Hz 1.8m H    |  |  |  |
| Mode 6          | HDMI 640*480/60Hz 1.8m H      |  |  |  |
| Mode 7          | HDMI 1920*1080/75Hz 1.5m H    |  |  |  |
| Mode 8          | HDMI 1920*1080/75Hz 1.2m H    |  |  |  |
| Mode 9          | HDMI 1920*1080/75Hz 1.8m V    |  |  |  |

# Evaluation description:

- 1. The maximum resolution is evaluated Mode 1-4. The worst case is Mode 1 and evaluated the middle and low resolution Mode 5 and Mode 6.
- 2. According to the client's requirement, choose Mode 1, Mode 2, Mode 4 and recorded in test report.
- 3. RS Acoudtic: The Front, Rear, Left and Right were evaluated. The worst placement direction is Front and recorded in this report

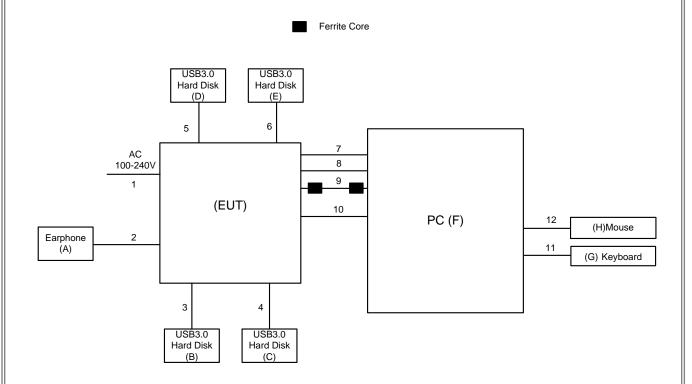

# 2.3 EUT OPERATING CONDITIONS

The EUT exercise program used during radiated and/or conducted emission measurement was designed to exercise the various system components in a manner similar to a typical use. The standard test signals and output signal as following:

- 1. EUT connected to PC via HDMI & Display & D-SUB & USB cable.
- 2. EUT connected to Earphone via Earphone cable.
- 3. EUT connected to USB3.0 Hard Disk (B&C&D&E) via USB cable.
- 4. Mouse and Keyboard connected to PC via USB cable.

# 2.4 BLOCK DIAGRAM SHOWING THE CONFIGURATION OF SYSTEM TESTED

# 2.5 DESCRIPTION OF SUPPORT UNITS

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Item | Equipment        | Mfr/Brand | Model/Type No.   | Series No.              |
|------|------------------|-----------|------------------|-------------------------|
| Α    | Earphone         | APPLE     | N/A              | N/A                     |
| В    | USB3.0 Hard Disk | LACIE     | Lacie S.A Series | NL34BFER                |
| С    | USB3.0 Hard Disk | LACIE     | Lacie S.A Series | NL34BJSM                |
| D    | USB3.0 Hard Disk | LACIE     | Lacie S.A Series | NL33PVLS                |
| E    | USB3.0 Hard Disk | LACIE     | Lacie S.A Series | NL34BJRF                |
| F    | PC               | DELL      | Vostro 470       | 24454162837             |
| G    | Keyboard         | DELL      | KB212-B          | CN0HTXH97158125004DXA01 |
| Н    | Mouse            | DELL      | MS111-P          | CN011D3V71581279OLOT    |

| Item | Cable Type     | Shielded Type | Ferrite Core | Length       |
|------|----------------|---------------|--------------|--------------|
| 1    | AC Cable       | NO            | NO           | 1.8/1.5/1.2m |
| 2    | Earphone Cable | NO            | NO           | 1.2m         |
| 3    | USB Cable      | YES           | NO           | 1.0m         |

| 12   | USB Cable      | YES           | NO           | 1.8m         |

# 3. EMC EMISSION TEST- EN55032:2012+AC:2013&2015

#### 3.1 RADIATED EMISSION UP TO 1 GHZ

#### **3.1.1 LIMITS**

Class B equipment up to 1000MHz

| _         | Med      | asurement      | Class B limit dB(uV/m)     |
|-----------|----------|----------------|----------------------------|
| Frequency | IVIE     | asurement      | Class B liffit dB(d V/III) |
| MHz       | Distance | Detector       | SAC                        |
|           | m        | type/bandwidth | SAC                        |
| 30-230    | 10       | Quasi peak     | 30                         |
| 230-1000  | 10       | / 120 kHz      | 37                         |

#### Notes:

- (1) The limit for radiated test was performed according to as following: EN 55032
- (2) The tighter limit applies at the band edges.
- (3) Emission level (dBuV/m)=20log Emission level (uV/m).
- (4) The test result calculated as following: Measurement Value = Reading Level + Correct Factor Correct Factor = Antenna Factor + Cable Loss - Amplifier Gain(if use) Margin Level = Measurement Value - Limit Value

#### 3.1.2 MEASUREMENT INSTRUMENTS LIST

Remark: "N/A" denotes no model no., no serial no. or no calibration specified.

All calibration period of equipment list is one year.

#### 3.1.3 TEST PROCEDURE

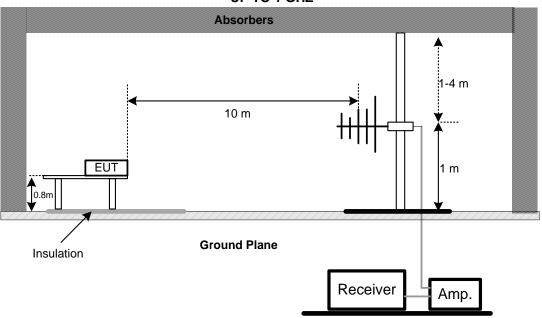

- a. The measuring distance of 10 m shall be used for measurements. The EUT was placed on the top of a rotating table 0.8 meter above the ground at a 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.(below 1GHz).
- c. The height of the equipment or of the substitution antenna shall be 0.8 m, the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. The initial step in collecting radiated emission data is a receiver peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured
- e. All readings are Peak unless otherwise stated QP in column of Note. Peak denotes that the Peak reading compliance with the QP Limits and then QP Mode measurement didn't perform. (below 1GHz)
- g. For the actual test configuration, please refer to the related Item Block Diagram of system tested.

#### 3.1.4 DEVIATION FROM TEST STANDARD

No deviation

#### 3.1.5 TEST SETUP

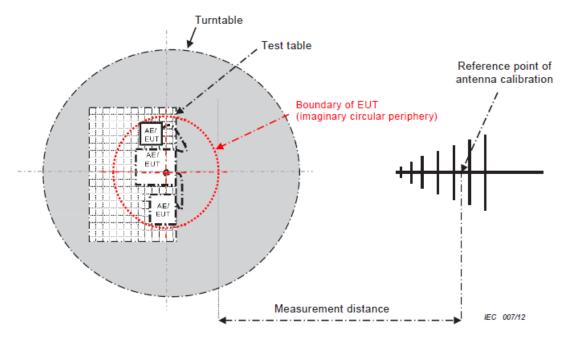

**UP TO 1 GHZ** 

Note: The antenna can be moved between 1 to 4 meters above the ground.

# 3.1.6 MEASUREMENT DISTANCE

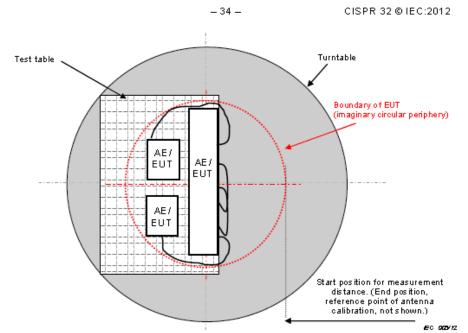

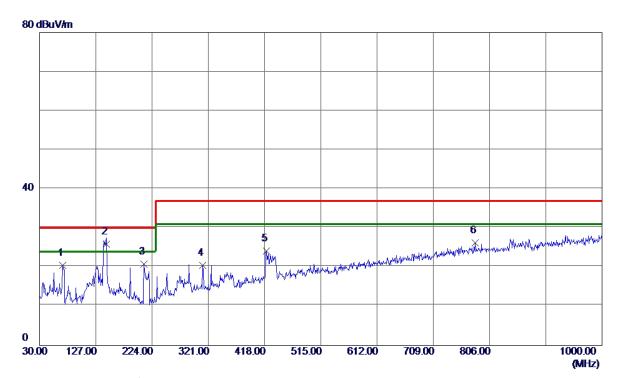

Figure C.2 - Boundary of EUT, Local AE and associated cabling

| 3000-6000 |               | 1 MHz                      | 74                     |  |

#### Notes:

- (1) The limit for radiated test was performed according to as following: EN 55032
- (2) The tighter limit applies at the band edges.
- (3) Emission level (dBuV/m)=20log Emission level (uV/m).
- (4) The test result calculated as following: Measurement Value = Reading Level + Correct Factor Correct Factor = Antenna Factor + Cable Loss - Amplifier Gain(if use) Margin Level = Measurement Value - Limit Value

Required highest frequency for radiated measurement

| Highest internal frequency (F <sub>x</sub> ) | Highest measured frequency             |

Remark: "N/A" denotes no model no., no serial no. or no calibration specified.

All calibration period of equipment list is one year.

# 3.2.3 TEST PROCEDURE

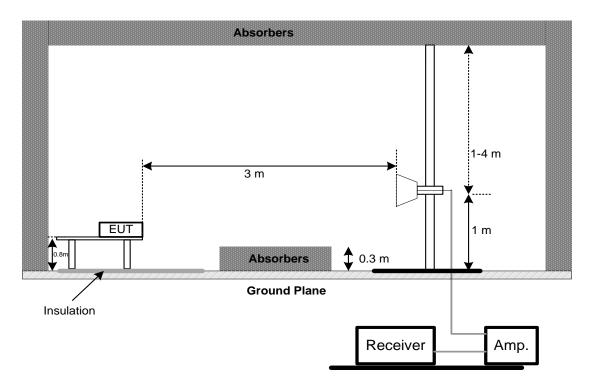

- a. The measuring distance of 3 m shall be used for measurements. The EUT was placed on the top of a rotating table 0.8 meter above the ground at a 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.(above 1GHz)
- b. The height of the equipment or of the substitution antenna shall be 0.8 m, the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- c. The initial step in collecting radiated emission data is a receiver peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.
- d. All readings are Peak Mode value unless otherwise stated AVG in column of Note. If the Peak Mode Measured value compliance with the Peak Limits and lower than AVG Limits, the EUT shall be deemed to meet both Peak & AVG Limits and then only Peak Mode was measured, but AVG Mode didn't perform. (above 1GHz)
- f. For the actual test configuration, please refer to the related Item Block Diagram of system tested.

#### 3.2.4 DEVIATION FROM TEST STANDARD

No deviation

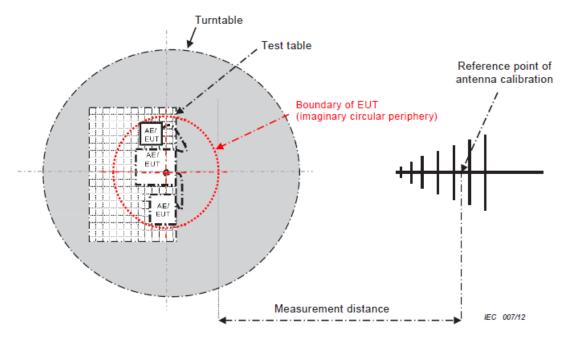

#### 3.2.5 TEST SETUP

#### **ABOVE 1 GHZ**

### 3.3 CONDUCTED EMISSION MEASUREMENT AT AC MAINS POWER PORTS

#### **3.3.1 LIMITS**

Requirements for conducted emissions from AC mains power ports of Class B equipment

| Frequency Range | Coupling | Detector Type /       | Class B Limits |
|-----------------|----------|-----------------------|----------------|
| MHz             | Device   | bandwidth             | (dB(µV) )      |
| 0.15 - 0.5      |          | ,                     | 66-56          |
| 0.5 - 5         | AMN      | Quasi Peak /<br>9 kHz | 56             |
| 5 - 30          |          | O KI IZ               | 60             |
| 0.15 - 0.5      |          | . ,                   | 56-46          |
| 0.5 - 5         | AMN      | Average /<br>9 kHz    | 46             |
| 5 - 30          |          | J KI IZ               | 50             |

#### NOTE:

(1) The test result calculated as following:

Measurement Value = Reading Level + Correct Factor

Correct Factor = Insertion Loss + Cable Loss + Attenuator Factor(if use)

Margin Level = Measurement Value - Limit Value

#### 3.3.2 MEASUREMENT INSTRUMENTS LIST

| Item | Kind of Equipment           | Manufacturer | Type No.                     | Series Model | Calibrated until |
|------|-----------------------------|--------------|------------------------------|--------------|------------------|
| 1    | 50Ω Terminator              | SHX          | TF2-3G-A                     | 8122901      | Mar. 10, 2020    |
| 2    | TWO-LINE<br>V-NETWORK       | R&S          | ENV216                       | 100526       | Mar. 10, 2020    |
| 3    | EMI Test Receiver           | R&S          | ESR3                         | 101862       | Aug. 03, 2020    |
| 4    | Artificial-Mains<br>Network | SCHWARZBECK  | NSLK 8127                    | 8127685      | Mar. 10, 2020    |
| 5    | TRANSIENT<br>LIMITER        | EM           | EM-7600                      | 772          | Mar. 10, 2020    |
| 6    | Cable                       | N/A          | N/A(6m)                      | N/A          | Mar. 12, 2020    |
| 7    | Measurement<br>Software     | Farad        | EZ-EMC<br>Ver.NB-03A1<br>-01 | N/A          | N/A              |

Remark: "N/A" denotes no model name, serial no. or calibration specified.

All calibration period of equipment list is one year.

#### 3.3.3 TEST PROCEDURE

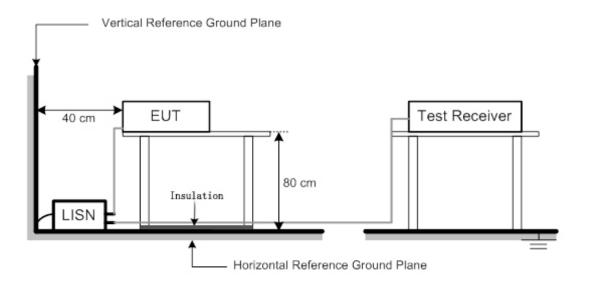

- a. The EUT was placed 0.8 meters from the horizontal ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- c. I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- d. LISN at least 80 cm from nearest part of EUT chassis.
- e. For the actual test configuration, please refer to the related Item -EUT Test Photos.

## 3.3.4 DEVIATION FROM TEST STANDARD

No deviation

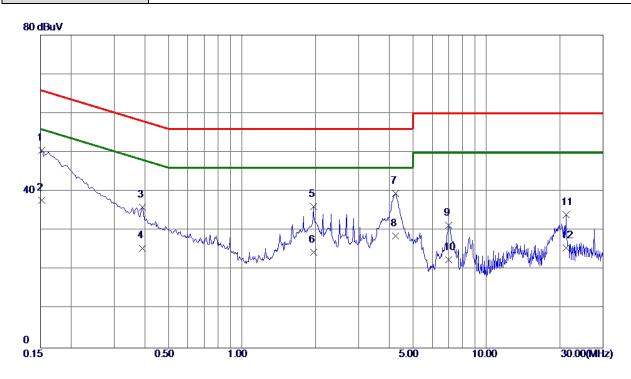

## 3.3.5 TEST SETUP

## 3.3.6 TEST RESULTS

## 4. EMC EMISSION TEST- EN 55032:2015+AC:2016

## **4.1 RADIATED EMISSIONS UP TO 1 GHZ**

### **4.1.1 LIMITS**

Class B equipment up to 1000MHz

| Frequency<br>Range |          | Measureme     | Class B limits              |          |
|--------------------|----------|---------------|-----------------------------|----------|
| MHz                | Facility | Distance<br>m | Detector type/<br>bandwidth | dB(μV/m) |
| 30 - 230           | SAC      | 10            | Quasi peak / 120            | 30       |
| 230 - 1000         | SAC      | 10            | kHz                         | 37       |

#### Notes:

- (1) The limit for radiated test was performed according to as following: EN 55032
- (2) The tighter limit applies at the band edges.
- (3) Emission level (dBuV/m)=20log Emission level (uV/m).
- (4) The test result calculated as following: Measurement Value = Reading Level + Correct Factor Correct Factor = Antenna Factor + Cable Loss - Amplifier Gain(if use) Margin Level = Measurement Value - Limit Value

## 4.1.2 MEASUREMENT INSTRUMENTS LIST

## Up to 1GHz:

| Item | Kind of Equipment           | Manufacturer      | Type No.                 | Series Model | Calibrated until |

Remark: "N/A" denotes no model no., no serial no. or no calibration specified.

All calibration period of equipment list is one year.

### 4.1.3 TEST PROCEDURE

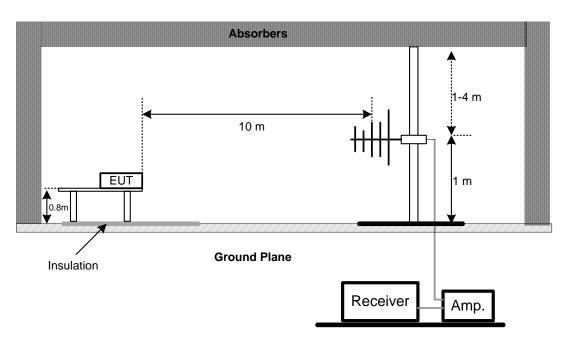

- a. The measuring distance of 10 m shall be used for measurements. The EUT was placed on the top of a rotating table 0.8 meter above the ground at a 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.(below 1GHz).
- b. The height of the equipment or of the substitution antenna shall be 0.8 m, the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- c. The initial step in collecting radiated emission data is a receiver peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.
- d. All readings are Peak unless otherwise stated QP in column of Note. Peak denotes that the Peak reading compliance with the QP Limits and then QP Mode measurement didn't perform. (below 1GHz)
- e. For the actual test configuration, please refer to the related Item Block Diagram of system tested.

#### 4.1.4 DEVIATION FROM TEST STANDARD

No deviation

#### 4.1.5 TEST SETUP

**UP TO 1 GHZ** 

Note: The antenna can be moved between 1 to 4 meters above the ground.

## **4.1.6 MEASUREMENT DISTANCE**

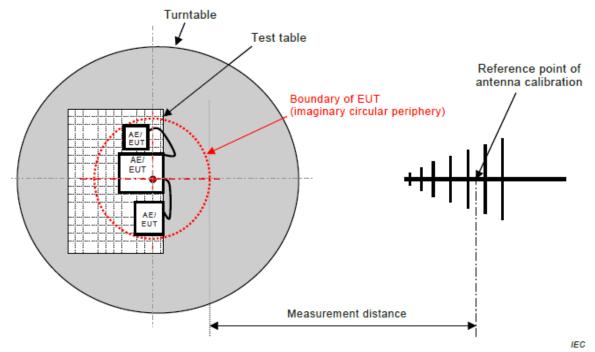

Figure C.1 - Measurement distance

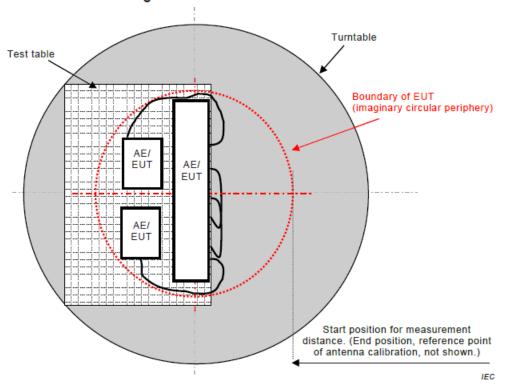

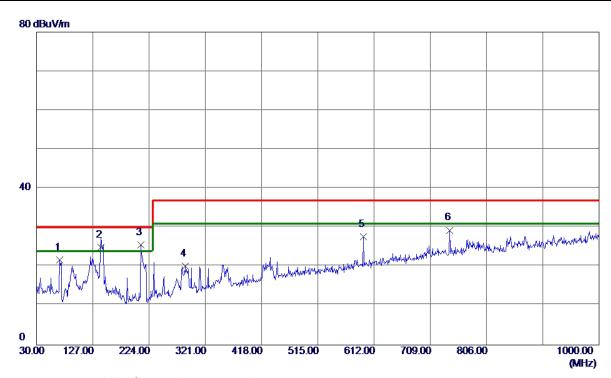

Figure C.2 - Boundary of EUT, Local AE and associated cabling

| 3000 - 6000             |  |                            | 1 MHz     | 74                         |  |  |  |

### Notes:

- (1) The limit for radiated test was performed according to as following: EN 55032
- (2) The tighter limit applies at the band edges.
- (3) Emission level (dBuV/m)=20log Emission level (uV/m).
- (4) The test result calculated as following: Measurement Value = Reading Level + Correct Factor Correct Factor = Antenna Factor + Cable Loss - Amplifier Gain(if use) Margin Level = Measurement Value - Limit Value

Required highest frequency for radiated measurement

| Highest internal frequency (F <sub>x</sub> ) | Highest measured frequency             |
|--|--|
| MHz  | MHz                                    |
| F <sub>x</sub> ≦108                          | 1000                                   |
| 108 <f<sub>x ≤500</f<sub>                    | 2000                                   |
| 500 < F <sub>x</sub> ≤1000                   | 5000                                   |
| F <sub>x</sub> >1000                         | 5 <sup>th</sup> up to a maximum 6 GHz, |

Note for FM and TV broadcast receiver,  $F_x$  is determined from the highest frequency generated or used excluding the local oscillator and tuned frequencies.

### **Above 1GHz:**

Remark: "N/A" denotes no model no., no serial no. or no calibration specified.

All calibration period of equipment list is one year.

## 4.2.2 TEST PROCEDURE

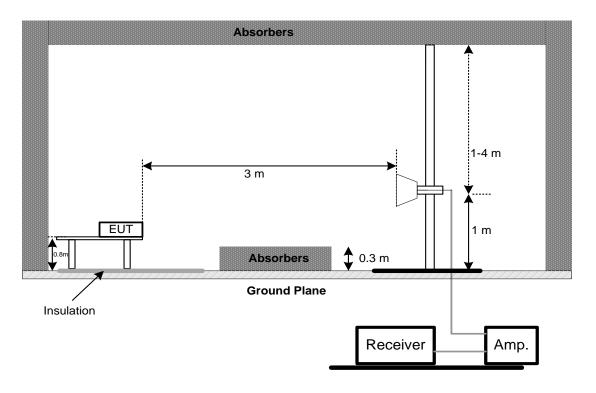

- a. The measuring distance of 3 m shall be used for measurements. The EUT was placed on the top of a rotating table 0.8 meter above the ground at a 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The height of the equipment or of the substitution antenna shall be 0.8 m, the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- c. The initial step in collecting radiated emission data is a receiver peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.
- d. All readings are Peak Mode value unless otherwise stated AVG in column of Note. If the Peak Mode Measured value compliance with the Peak Limits and lower than AVG Limits, the EUT shall be deemed to meet both Peak & AVG Limits and then only Peak Mode was measured, but AVG Mode didn't perform. (above 1GHz)
- e. For the actual test configuration, please refer to the related Item Block Diagram of system tested.

### 4.2.3 DEVIATION FROM TEST STANDARD

No deviation

#### 4.2.4 TEST SETUP

#### **ABOVE 1 GHZ**

## 4.2.5 MEASUREMENT DISTANCE

Remark: "N/A" denotes no model name, serial no. or calibration specified.

All calibration period of equipment list is one year.

#### 4.3.3 TEST PROCEDURE

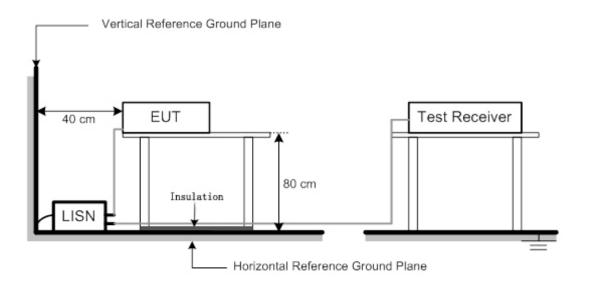

- a. The EUT was placed 0.8 meters from the horizontal ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- c. I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- d. LISN at least 80 cm from nearest part of EUT chassis.
- e. For the actual test configuration, please refer to the related Item -EUT Test Photos.

## 5. HARMONIC AND FLICKER TEST

### 5.1 HARMONIC CURRENT EMISSIONS

#### **5.1.1 LIMITS**

The power consumption is less than 75W, there is no limit applied.

### **5.1.2 MEASUREMENT INSTRUMENTS LIST**

| Item | Kind of Equipment                 | Manufacturer              | Type No.               | Series Model | Calibrated until |

| 3    | Measurement<br>Software           | California                | CTS4.0<br>Version 4.21 | N/A          | N/A              |

Remark: "N/A" denotes no model no., no serial No. or no calibration specified.

All calibration period of equipment list is one year.

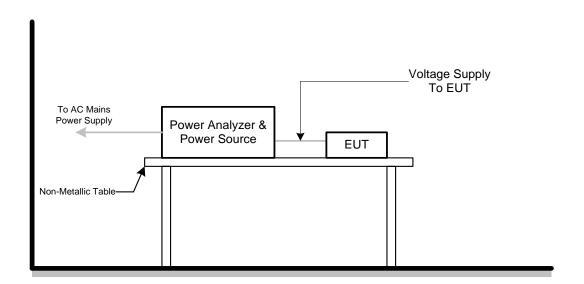

### **5.1.3 TEST PROCEDURE**

- a. The EUT was placed on the top of a wooden table 0.8 meters above the ground and operated to produce the maximum harmonic components under normal operating conditions.
- b. The correspondent test program of test instrument to measure the current harmonics emanated from EUT is chosen. The measure time shall be not less than the time necessary for the EUT to be exercised.

### **5.1.4 DEVIATION FROM TEST STANDARD**

No deviation

## 5.2 VOLTAGE CHANGES, VOLTAGE FLUCTUATIONS AND FLICKER TEST

## **5.2.1 LIMITS**

| Tests | Limits<br>EN 61000-3-3 | Descriptions                     |
|-------|------------------------|----------------------------------|
| Pst   | ≤ 1.0, Tp= 10 min.     | Short Term Flicker Indicator     |
| Plt   | ≤ 0.65, Tp=2 hr.       | Long Term Flicker Indicator      |
| dc    | ≤ 3.3%                 | Relative Steady-State V-Chang    |
| dmax  | ≤ 4%                   | Maximum Relative V-change        |
| d (t) | ≤ 500 ms               | Relative V-change characteristic |

### **5.2.2 MEASUREMENT INSTRUMENTS LIST**

| Item | Kind of Equipment                 | Manufacturer              | Type No.               | Series Model | Calibrated until |
|------|-----------------------------------|---------------------------|------------------------|--------------|------------------|
| 1    | Harmonics and<br>Flicker Analyzer | California<br>Instruments | PACS-1                 | 72344        | Aug. 03, 2020    |
| 2    | 3KVA AC Power source              | California<br>Instruments | 3001ix                 | 56309        | Aug. 03, 2020    |
| 3    | Measurement<br>Software           | California                | CTS4.0<br>Version 4.21 | N/A          | N/A              |

Remark: "N/A" denotes no model no., no serial No. or no calibration specified.

All calibration period of equipment list is one year.

## **5.2.3 TEST PROCEDURE**

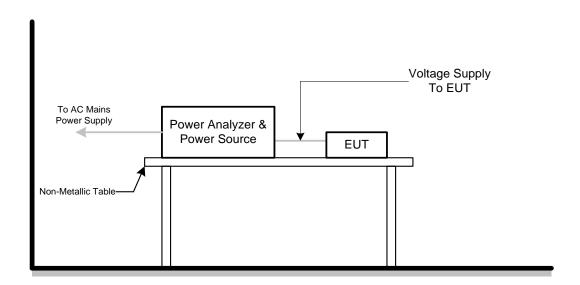

- a. Tests was performed according to the Test Conditions/Assessment of Voltage Fluctuations specified in EN 61000-3-3 depend on which standard adopted for compliance measurement.
- b. All types of harmonic current and/or voltage fluctuation in this report are assessed by direct measurement using flicker-meter.

## **5.2.4 DEVIATION FROM TEST STANDARD**

No deviation

## 5.2.5 TEST SETUP

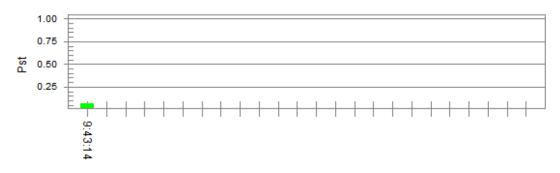

## **5.2.6 TEST RESULTS**

| Test Voltage | AC 230V/50Hz               |
|--------------|----------------------------|
| Test Mode    | HDMI 1920*1080/75Hz 1.8m H |

- 2) Applicable only to ports which, according to the manufacturer's specification, support cable lengths greater than 3 m.

# **6.2 GENERAL PERFORMANCE CRITERIA**

According to **EN55035** standard, the general performance criteria as following:

| Criterion A | The equipment shall continue to operate as intended without operator intervention. No degradation of performance, loss of function or change of operating state is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.  |
|-------------|---|
| Criterion B | During the application of the disturbance, degradation of performance is allowed. However, nounintended change of actual operating state or stored data is allowed to persist after the test.  After the test, the equipment shall continue to operate as intended without operator intervention; no degradation of performance or loss of function is allowed, below a performance level specified by the manufacturer, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level (or the permissible performance loss), or recovery time, is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended. |
| Criterion C | Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions. Areboot or re-start operation is allowed.  Information stored in non-volatile memory, or protected by a battery backup, shall not be lost.  |

# 6.3 ANNEX D (NORMATIVE) - DISPLAY AND DISPLAY OUTPUT FUNCTION

#### **6.3.1 PERFORMANCE CRITERIA**

#### Performance criterion A

#### for continuous radiated and conducted disturbances tests:

Apply criterion A as defined in GENERAL PERFORMANCE CRITERIA. Additionally, an increase in any degradation greater than

just perceptible by observation of the image shall not occur as a consequence of the application of the test. Examples of such degradations are:

- superimposed patterning;
- positional disturbances due to synchronisation errors;
- geometric distortion;
- change of contrast or brightness;
- · picture artefacts;
- freezing or disturbance of motion;
- image loss;
- video data or decoding errors.

#### **Performance criterion A**

#### for the power frequency magnetic field tests:

Alternative 1: A continuous magnetic field of 1 A/m:

The jitter (in mm) shall not exceed the value

$$\frac{\text{(character height in mm} + 0,3) \times 2,5}{33,3}$$

#### Performance criterion B:

Apply criterion B as defined in GENERAL PERFORMANCE CRITERIA.

#### Performance criterion C:

Apply criterion C as defined in GENERAL PERFORMANCE CRITERIA.

#### 6.4 ANNEX G (NORMATIVE) - AUDIO OUTPUT FUNCTION

#### **6.4.1 PERFORMANCE CRITERIA**

#### Performance criterion A:

For devices that support telephony functions the limits of Table G.3 shall apply. With respect to Table G.3:

- the interference ratio (electrical or acoustic) shall meet the limits in column 3; or,
- the acoustic level of the demodulated audio shall be less than the limits in column 4; or,
- the digitally coded level of demodulated audio shall be less than limits in column 5; or,
- the analogue level of the demodulated audio shall be less than the limits in column 6.

Table G.3 – Performance criterion A – Limits for devices supporting telephony

| Type of       | Frequency range | Acoustic or electrical | Equivalent direct measurement |                 |                 |  |  |
|---------------|-----------------|------------------------|-------------------------------|-----------------|-----------------|--|--|
| immunity test | MHz             | interference ratio     | dB (SPL)                      | Digital<br>dBm0 | Analogue<br>dBm |  |  |
| Conducted     | 0,15 to 30      | -20 dB                 | 55                            | -50             | -50             |  |  |
| Conadotod     | 30 to 80        | -10 dB                 | 65                            | -40             | -40             |  |  |
| Radiated      | 80 to 1000      | 0 dB                   | 75                            | -30             | -30             |  |  |

For terminals connected to digital wired network ports (such as Ethernet, ISDN), measurements of the demodulated 1 kHz may be performed on a remote AE, ideally of the same design.

#### For all other devices:

The measured acoustic interference ratio and/or the measured electrical interference ratio during the test shall be –20 dB or better.

#### Performance criterion B:

Use the general performance criterion B. See GENERAL PERFORMANCE CRITERIA.

#### **Performance criterion C:**

Use the general performance criterion C. See GENERAL PERFORMANCE CRITERIA.

#### 6.5 ELECTROSTATIC DISCHARGE IMMUNITY TEST (ESD)

Remark: "N/A" denotes no model no., no serial No. or no calibration specified.

All calibration period of equipment list is one year.

#### 6.5.3 TEST PROCEDURE

The test generator necessary to perform direct and indirect application of discharges to the EUT in the following manner:

a. The test shall be performed with single discharges. On each pre-selected point at least 10 single discharges (in the most sensitive polarity) shall be applied.

NOTE 1 The minimum number of discharges applied is depending on the EUT; for products with synchronized circuits the number of discharges should be larger.

For the time interval between successive single discharges an initial value of 1 s is recommended. Longer intervals may be necessary to determine whether a system failure has occurred.

NOTE 2 The points to which the discharges should be applied may be selected by means of an explor ation carried out at a repetition rate of 20 discharges per second, or more. Vertical Coupling Plane (VCP):

The coupling plane, of dimensions 0.5m x 0.5m, is placed parallel to, and positioned at a distance 0.1m from, the EUT, with the Discharge Electrode touching the coupling plane.

The four faces of the EUT will be performed with electrostatic discharge.

Horizontal Coupling Plane (HCP):

The coupling plane is placed under to the EUT. The generator shall be positioned vertically at a distance of 0.1m from the EUT, with the Discharge Electrode touching the coupling plane.

The four faces of the EUT will be performed with electrostatic discharge.

b. For TABLE-TOP equipment:

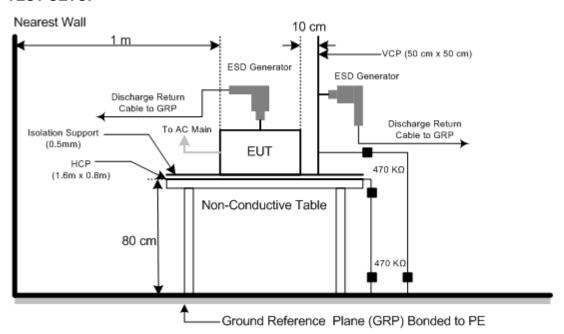

The configuration consisted of a wooden table 0.8 meters high standing on the Ground Reference Plane. The GRP consisted of a sheet of aluminum at least 0.25mm thick, and 2.5 meters square connected to the protective grounding system. A Horizontal Coupling Plane (1.6m x 0.8m) was placed on the table and attached to the GRP by means of a cable with 940k total impedance. The equipment under test was installed in a representative system as described in IEC 61000-4-2, and its cables were placed on the HCP and isolated by an insulating support of 0.5mm thickness. A distance of1-meter minimum was provided between the EUT and the walls of the laboratory and any other metallic structure.

# 6.6.3 TEST PROCEDURE

The EUT and support equipment are in a fully-anechoic chamber.

The testing distance from antenna to the EUT was 3 meters.

For TABLE-TOP equipment:

The EUT installed in a representative system as described in IEC 61000-4-3 was placed on a non-conductive table 0.8 meters in height. The system under test was connected to the power and signal wire according to relevant installation instructions.

The other condition as following manner:

- a. The field strength level was 3 V/m(unmodulated, r.m.s).
- b. The frequency range is swept from 80 MHz to 1000 MHz, with the signal 80%amplitude modulated with a 1 kHz sine wave. The rate of sweep did not exceed 1.5x 10-3 decade/s. Where the frequency range is swept incrementally, the step size was 1% of fundamental.
- c. The dwell time at each frequency shall be not less than the time necessary for the EUT to be able to respond.
- d. The test was performed with the EUT exposed to both vertically and horizontally polarized fields on each of the four sides.

<sup>&</sup>quot;\*" calibration period of equipment list is three year.

For Display and display output functions:

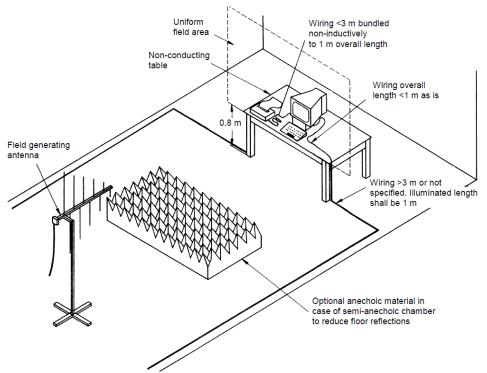

- a. The display quality evaluated by direct observation.
- b. For display output function evaluation, a suitable display device shall be connected. This device shall meet the immunity requirements for displays specified in this document. The screen size shall be typical for the display output the diagonal screen size shall be at least 0,50 m.
- c. The display shall be observed under normal viewing conditions including viewing distance using a reduced ambient light level preferably in the range 15 lx to 20 lx. The viewing distance or settings of the video camera monitoring system shall be sufficient to provide visibility of the whole display. In the case of direct observation the selected viewing distance shall be recorded in the test report.

#### 6.6.4 DEVIATION FROM TEST STANDARD

No deviation

#### 6.6.5 TEST SETUP

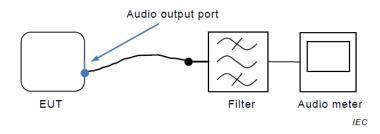

a) For Continuous induced RF disturbances

# For Audio output function

# (1) Audio output port

The filter is the audio filter specified in G.6.1 and is typically incorporated into the audio meter. Additional filtering might be necessary to ensure that the RF disturbance signal does not interfere with the measurement.

Remark: "N/A" denotes no model no., no serial No. or no calibration specified.

All calibration period of equipment list is one year.

#### **6.7.3 TEST PROCEDURE**

For TABLE-TOP equipment:

The configuration consisted of a wooden table (0.8m high) standing on the Ground Reference Plane and should be located 0.1 m+/- 0.01m above the Ground Reference Plane. The GRP consisted of a sheet of aluminum (at least 0.25mm thick and 2.5m square) connected to the protective grounding system. A minimum distance of 0.5m was provided between the EUT and the walls of the laboratory or any other metallic structure.

The other condition as following manner:

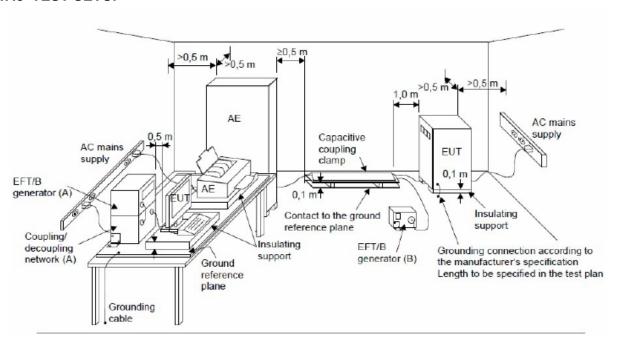

- a. Both positive and negative polarity discharges were applied.
- b. The duration time of each test sequential was 1 minute.

Remark: "N/A" denotes no model no., no serial No. or no calibration specified.

All calibration period of equipment list is one year.

#### **6.8.3 TEST PROCEDURE**

a. For EUT power supply:

The surge is to be applied to the EUT power supply terminals via the capacitive coupling network. Decoupling networks are required in order to avoid possible adverse effects on equipment not under test that may be powered by the same lines, and to provide sufficient decoupling impedance to the surge wave. The power cord between the EUT and the coupling/decoupling networks shall be 2meters in length (or shorter).

- b. For test applied to unshielded unsymmetrically operated interconnection lines of EUT:
  - The surge is applied to the lines via the capacitive coupling. The coupling /decoupling networks shall not influence the specified functional conditions of the EUT. The interconnection line between the EUT and the coupling/decoupling networks shall be 2 meters in length (or shorter).
- c. For test applied to unshielded symmetrically operated interconnection /telecommunication lines of EUT:

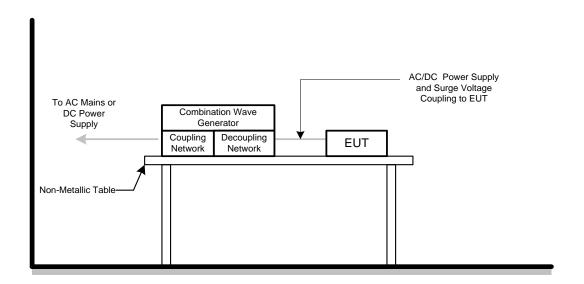

The surge is applied to the lines via gas arrestors coupling. Test levels below the ignition point of the coupling arrestor cannot be specified. The interconnection line between the EUT and the coupling/decoupling networks shall be 2 meters in length (or shorter).

Remark: "N/A" denotes no model no., no serial No. or no calibration specified.

All calibration period of equipment list is one year.

#### 6.9.3 TEST PROCEDURE

The equipment to be tested is placed on an insulating support of 0.1m height above a reference ground plane. All cables exiting the EUT shall be supported at a height of at least 30 mm above the reference ground plane. All relevant cables shall be provided with the appropriate coupling and decoupling devices at a distance between 0.1 meters and 0.3 meters from the projected geometry of the EUT on the ground reference plane.

The other condition as following manner:

- a. The field strength level was 3 V (unmodulated, r.m.s.)
- b. The frequency range is swept from 150 kHz to 80 MHz, with the signal 80%amplitude modulated with a 1 kHz sine wave. The rate of sweep did not exceed 1.5x 10-3 decade/s. Where the frequency range is swept incrementally, the step size was 1% of fundamental.
- c. The dwell time at each frequency shall be not less than the time necessary for the EUT to be able to respond.

For Display and display output functions:

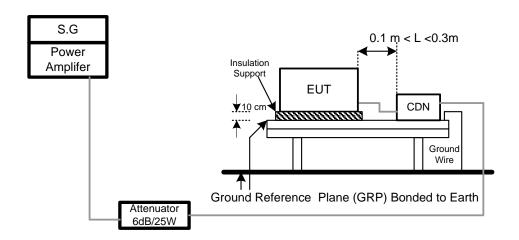

- a. The display quality evaluated by direct observation.
- b. For display output function evaluation, a suitable display device shall be connected. This device shall meet the immunity requirements for displays specified in this document. The screen size shall be typical for the display output.the diagonal screen size shall be at least 0,50 m.
- c. The display shall be observed under normal viewing conditions including viewing distance using a reduced ambient light level preferably in the range 15 lx to 20 lx. The viewing distance or settings of the video camera monitoring system shall be sufficient to provide visibility of the whole display. In the case of direct observation the selected viewing distance shall be recorded in the test report.

# 6.9.4 DEVIATION FROM TEST STANDARD

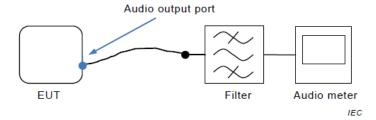

No deviation

#### 6.9.5 TEST SETUP

# For Audio output function

#### (1) Audio output port

The filter is the audio filter specified in G.6.1 and is typically incorporated into the audio meter. Additional filtering might be necessary to ensure that the RF disturbance signal does not interfere with the measurement.

Remark: "N/A" denotes no model no., no serial No. or no calibration specified.

All calibration period of equipment list is one year.

#### **6.10.3 TEST PROCEDURE**

For TABLE-TOP equipment:

The equipment shall be subjected to the test magnetic field by using the induction coil of standard dimension (1 m x 1 m). The induction coil shall then be rotated by 90 degrees in order to expose the EUT to the test field with different orientations.

The other condition as following manner:

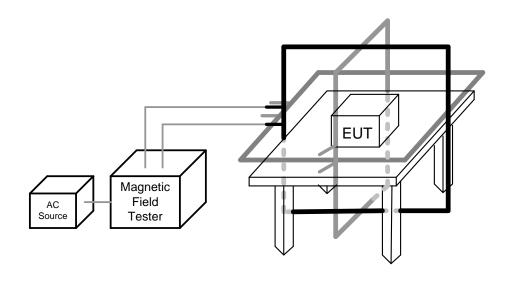

- a. The equipment cabinets shall be connected to the safety earth directly on the GRP via the earth terminal of the EUT.
- b. The cables supplied or recommended by the equipment manufacturer shall be used. 1 meter of all cables used shall be exposed to the magnetic field.

# 6.11 VOLTAGE DIPS, SHORT INTERRUPTIONS AND VOLTAGE VARIATIONS IMMUNITY TEST (DIP)

#### **6.11.1 TEST SPECIFICATION**

| Basic Standard         | IEC 61000-4-11                              |
|------------------------|---|
| Required Performance   | Voltage dips:                               |
|                        | B (For <5% residual voltage, dips)          |
|                        | C (For 70% residual voltage, dips)          |
|                        | C (For <5% residual voltage, Interruptions) |
| Interval between Event | Ten seconds                                 |
| Phase Angle            | 0°/180°                                     |
| Test Cycle             | 3 times                                     |

#### **6.11.2 MEASUREMENT INSTRUMENTS**

| Item | Kind of Equipment   | Manufacturer | Type No.       | Series Model | Calibrated until |
|------|---------------------|--------------|----------------|--------------|------------------|
| 1    | Cycle Sag Simulator | Prima        | DRP61011T<br>A | PR19076452   | Aug. 27, 2020    |

Remark: "N/A" denotes no model no., no serial No. or no calibration specified.

All calibration period of equipment list is one year.

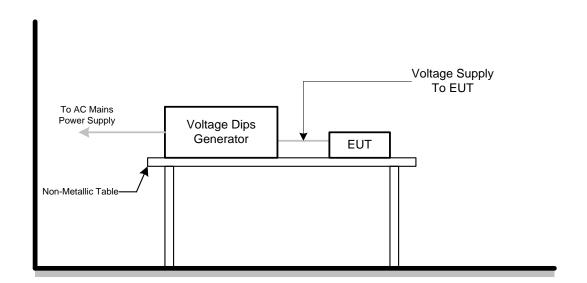

#### **6.11.3 TEST PROCEDURE**

The EUT shall be tested for each selected combination of test levels and duration with a sequence of three dips/interruptions with intervals of 10 s minimum (between each test event). Each representative mode of operation shall be tested. Abrupt changes in supply voltage shall occur at zero crossings of the voltage waveform.

#### **6.11.4 DEVIATION FROM TEST STANDARD**

No deviation

#### **6.11.5 TEST SETUP**
